To Whom It May Concern:

We recently applied Cypher Environmental's Dust Stop® Municipal Blend (DSMB) to our golf cart paths at our course to suppress the dust kicked up by the carts. Having recently purchased a new fleet of golf carts, we also wanted to ensure that we would see an extended lifespan on our investment.

DSMB was advertised to suppress dust and improve road durability, and has performed very well thus far. The treated paths have exhibited excellent properties during and after rain, as well as hot, dry and windy weather. Moreover, the treated roads have been more forgiving to our carts and equipment.

We were also pleased with the great customer support; both remote and on-site assistance was extremely helpful during the application of the product. Our golfers and staff have noticed a substantial improvement in the quality of our paths and service/access roads.

We look forward to future projects involving Cypher Environmental products.

Sincerely,

James Chapman
